## CONVERSION FACTORS AND ABBREVIATIONS

For the convenience of readers who may prefer to use metric (International System) units rather than the inch-pound units in this report, values may be converted using the following factors:

<u>Multiply Inch-Pound Unit</u>	<u>By</u>	<u>To Obtain Metric Unit</u>
inch (in.)	25.4	millimeter (mm)
foot (ft)	0.3048	meter (m)
mile (mi)	1.609	kilometer (km)
square mile (mi <sup>2</sup> )	2.590	square kilometer (km <sup>2</sup> )
cubic foot per second (ft <sup>3</sup> /s)	<u>0.3048</u>	meter per second (m <sup>3</sup> /s)

Sea Level: In this report "sea level" refers to the National Geodetic Vertical Datum of 1929 (NGVD of 1929)--a geodetic datum derived from a general adjustment of the first-order level nets of both the United States and Canada, formerly called "Mean Sea Level of 1929".

# RAINFALL-RUNOFF DATA FOR SOMERSET COUNTY, NEW JERSEY

By James B. Campbell

## ABSTRACT

Rainfall-runoff data are presented for eight selected drainage basins in Somerset County, New Jersey, for the 1980 through 1984 water years. In order to improve the existing methods for estimating flood-frequency and magnitude throughout the county, and to assist the county in their flood-monitoring efforts by providing real-time data, rainfall-runoff data were collected and a data base was created. The rainfall-runoff data were recorded at 5-minute intervals and were stored in the U.S. Geological Survey, New Jersey District computer. Rainfall data were collected at two sites within each drainage basin in order to improve areal coverage and data continuity. Data from eight rainfall-runoff gaging stations and eight auxiliary rainfall gages are summarized in this report. Rainfall and runoff data for selected storms also are summarized.

## INTRODUCTION

Flooding of small streams is a problem within Somerset County, and, with continued urbanization, the problem is becoming more critical. According to Harris and Rantz (1964), as a rural area is developed, two notable results are that the depth of flooding tends to increase and that lag time is reduced. Therefore, it is reasonable to assume that if urbanization continues, floods of greater magnitude can be expected to occur in Somerset County.

The floods in 1971, 1973, and 1975 caused considerable damage in Somerset County, and county officials wanted improved flood monitoring capabilities on small streams. The county officials also felt that the existing methods for estimating flood frequency and magnitude were inaccurate in areas of the county. Therefore, a project was undertaken by the U.S. Geological Survey in 1978, to establish a network of gaging stations for the collection of rainfall-runoff data to enhance flood monitoring and flood-frequency estimating techniques.

The project has two phases. The first phase is to set up and maintain a network of eight rainfall-runoff gaging stations and eight auxiliary rainfall gages. The auxiliary gages are located in the drainage basins about two-thirds of the way upstream from the gaging station. The second phase is to develop an improved method of estimating the magnitude and frequency of floods by creating extended synthetic flood records. This is done by combining existing long-term peakflow data and simulated long-term peakflow data. Simulated peakflow data were created for the eight selected drainage basins by applying a distributed routing rainfall-runoff model.

Somerset County, which is in north-central New Jersey has an area of 307 mi<sup>2</sup> (square miles)(Kirkham, 1976). Throughout this report, Somerset County and "study area" are used synonymously. The study area is in a region of the United States that is generally called the "humid east"--a zone receiving 40 to 50 inches of rain per year under normal weather conditions (McMurray, 1958).

The 1980-84 rainfall-runoff data will be used in the second phase of the project to develop a method for estimating flood-magnitude and frequency throughout the county. The rainfall-runoff data will assist the county's flood-monitoring efforts by providing real-time data over the telephone.

### Purpose and Scope

The purpose of this report is to present the basic data collected from the network of eight rainfall-runoff gaging stations and eight auxiliary rainfall gages for the 1980-84 water years. All data are presented by water year, defined as the 12-month period from October 1 through September 30. Daily rainfall and runoff data are presented through September 30, 1984.

All the stations in the gaging-station network are located in Somerset County. The gaging stations name and number are: Holland Brook at Readington (01398107), North Branch Raritan River near Far Hills (01398500), Peters Brook near Raritan (01400300), Pike Run at Belle Mead (01401650), Royce Brook tributary near Belle Mead (01402600), West Branch Middle Brook near Martinsville (01403150), Green Brook at Seeley Mills (01403400), and East Branch Stony Brook at Best lake at Watchung (01403535) (fig. 1).

### Acknowledgments

Valuable assistance was provided by the Somerset County Engineering Department who constructed the streamflow-gaging stations. Benchmark elevations and descriptions also were supplied by the county.

## PHYSIOGRAPHY, GEOLOGY, AND SOILS

Somerset County lies within two physiographic provinces (Fenneman, 1938). Most of the county is within the Piedmont province (fig. 2) and is underlain by conglomerate, sandstone, shale, and diabase of the Triassic Newark Group. Three mountains in the Piedmont province lie within the study area. The First and Second Watchung Mountains are in the northeastern part of the study area and Sourland Mountain is in the southwestern part. In general, the Piedmont province consists of gently rounded hills separated by wide valleys. The province ranges from about 50 to 400 feet above sea level in the county (Tobiasen, 1978).

A much smaller part of the county lies within the New England province (an area north of Bernardsville and Far Hills). This area consists of gently to steeply sloping uplands that are underlain by highly resistant Precambrian igneous and metamorphic rocks. The valleys are underlain by less resistant Paleozoic limestone. The New England province consists of broad, rounded or flat-topped ridges that rise 400 to 600 feet above the lowlands of the Piedmont province to the south.

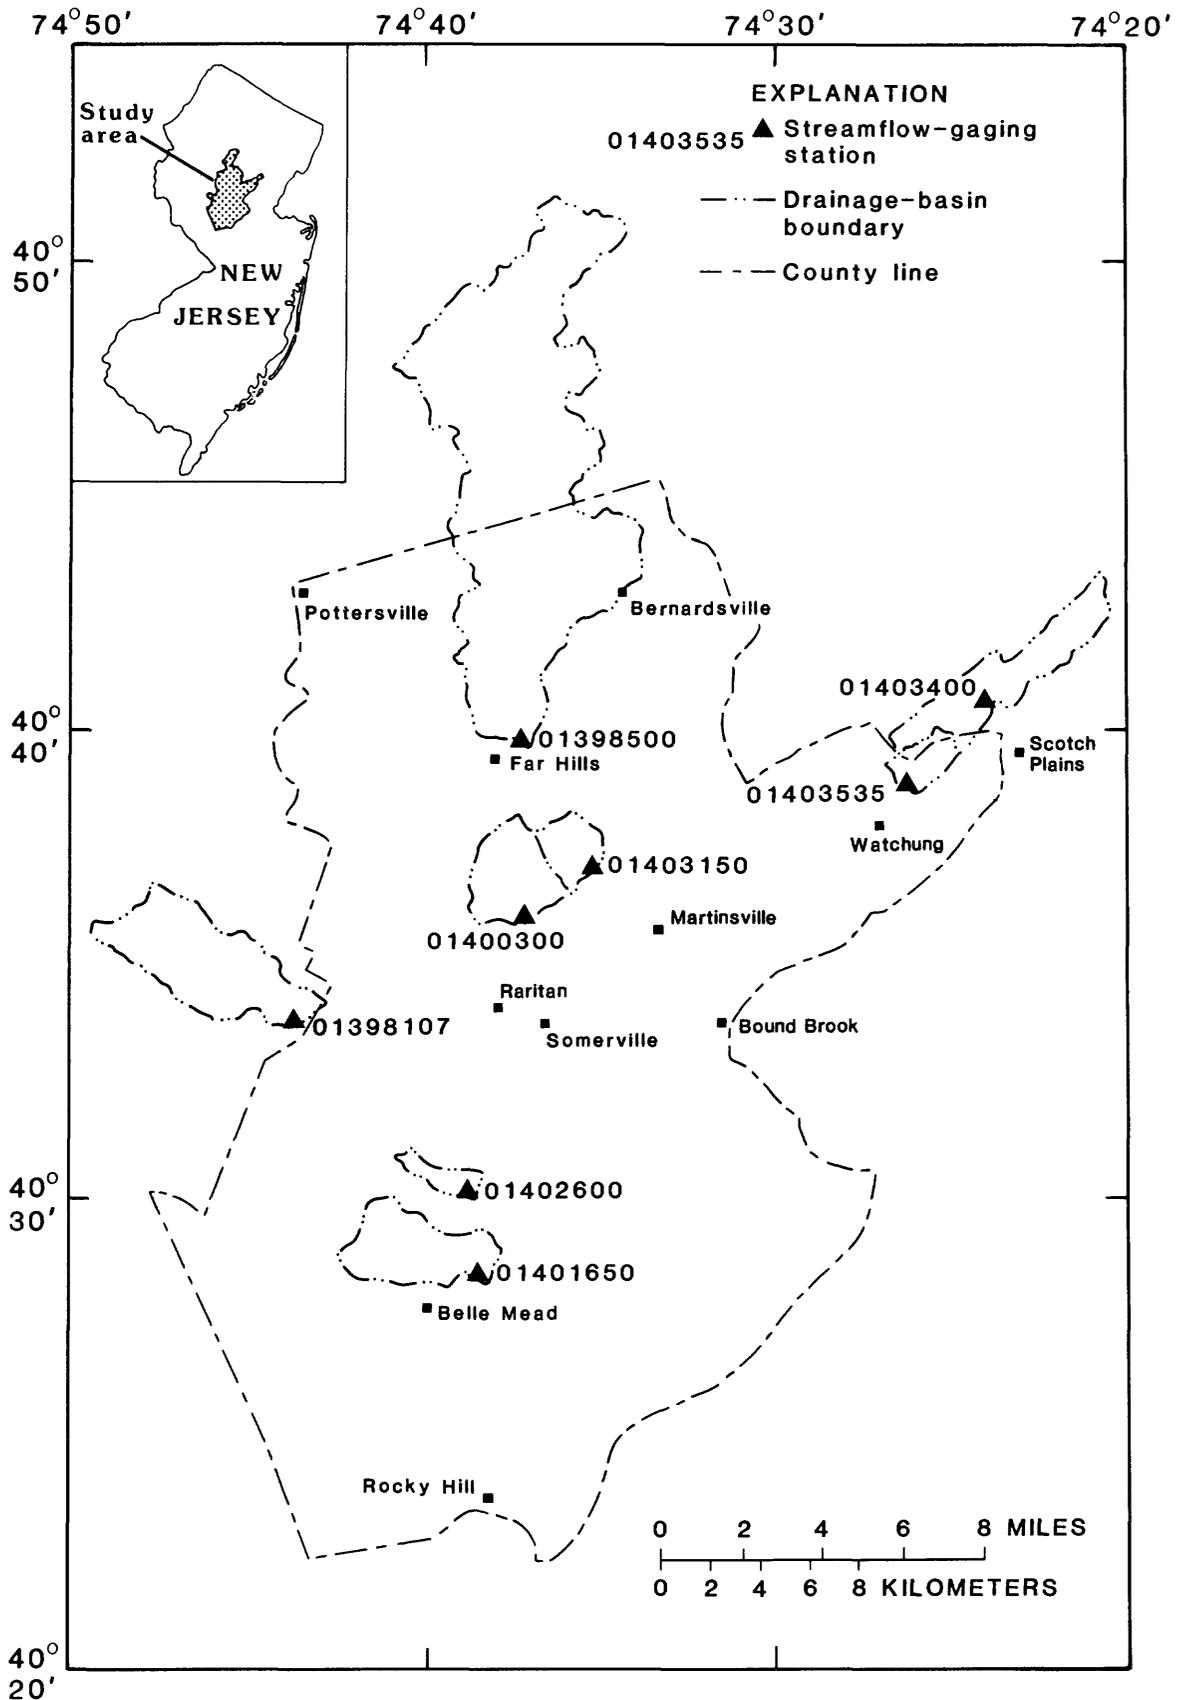

Figure 1. --Location of study drainage basins in Somerset County.

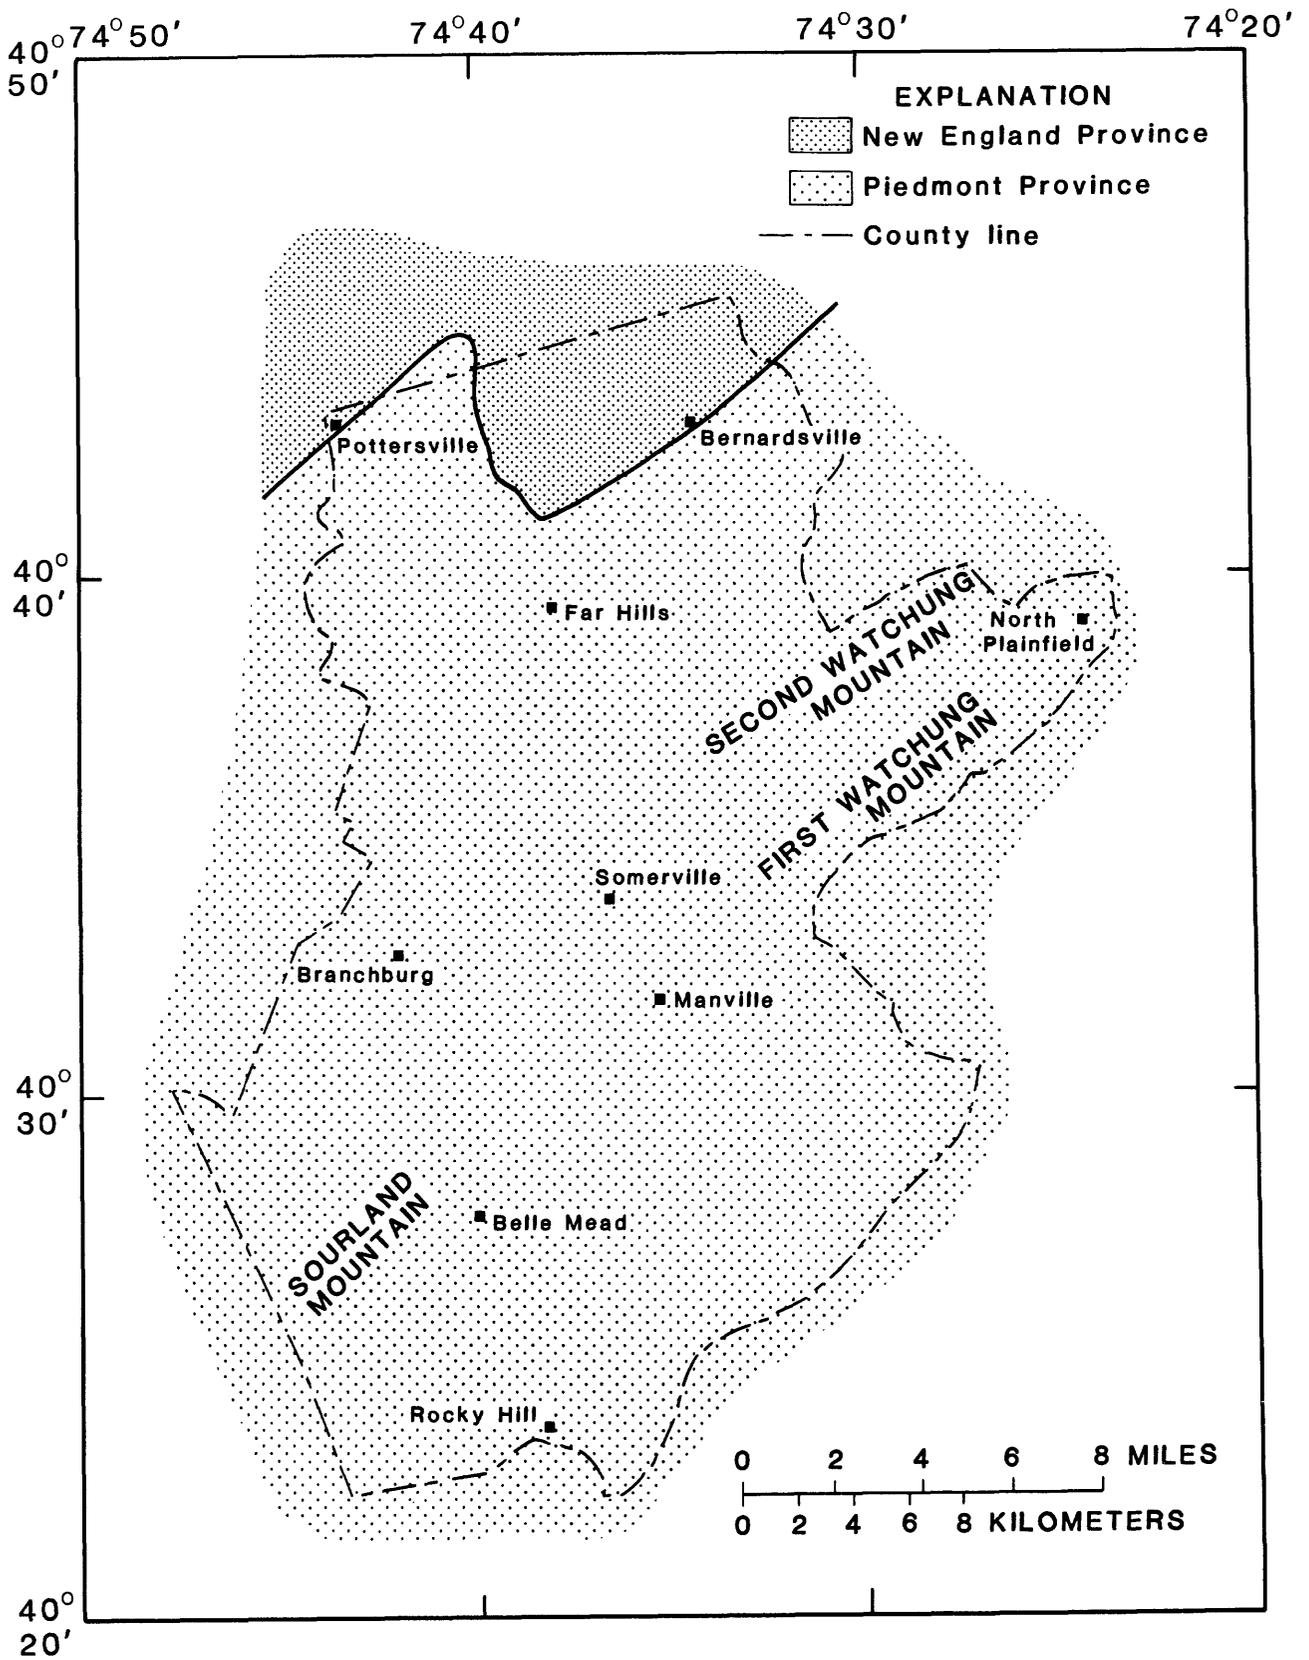

Figure 2.--Physiographic provinces in Somerset County.

Generally speaking, the soils of Somerset County are derived from red shale and sandstones. Detailed descriptions of the soils in the county can be found in Kirkham (1976).

#### HYDROLOGY

Almost all of Somerset County (88 percent) lies within the Raritan River basin. The Raritan River is the largest river entirely within New Jersey, draining a total of approximately 1,109 mi<sup>2</sup>. The Raritan River drainage system in New Jersey consists of the mainstem and five major tributaries:

##### Drainage area, in square miles

Raritan (mainstem)	175 mi <sup>2</sup>
South River	133 mi <sup>2</sup>
Lawrence Brook	45 mi <sup>2</sup>
Millstone River	287 mi <sup>2</sup>
North Branch Raritan River	190 mi <sup>2</sup>
South Branch Raritan River	279 mi <sup>2</sup>

Located within Somerset County are parts of four of the above major drainage basins: Raritan River (mainstem), 77 mi<sup>2</sup>; Millstone River, 100 mi<sup>2</sup>; and North Branch Raritan River, 64 mi<sup>2</sup>; and South Branch Raritan River, 26 mi<sup>2</sup> (fig. 3).

The northeastern section of the county lies within the Passaic River basin. The Passaic River drains about 950 mi<sup>2</sup>, of which less than 4 percent is located within the county.

#### DRAINAGE BASINS SELECTED FOR MODELING

The drainage basins were selected to meet the objectives of the project, their selection was based partially or wholly on the following criteria:

1. The drainage area of a basin had to be less than 10 mi<sup>2</sup> to be suitable for rainfall-runoff modeling (Dawdy and others, 1978).
2. The drainage basin had to have a history of known flooding problems.
3. The drainage basins had to be evenly distributed over the entire county.
4. Land development had to remain stable during the study and be typical of the different types of development in the study area.

##### Holland Brook at Readington (01398107)

The drainage area of the basin upstream from the gage is 9.00 mi<sup>2</sup>. The gaging station is 0.9 miles southeast of Readington (fig. 4). The station is on the right bank, 15 feet downstream from the bridge on Old York Road. From the gage, the stream drains southeastward 2.5 miles to the South Branch Raritan River at South Branch. The northwestern border of the

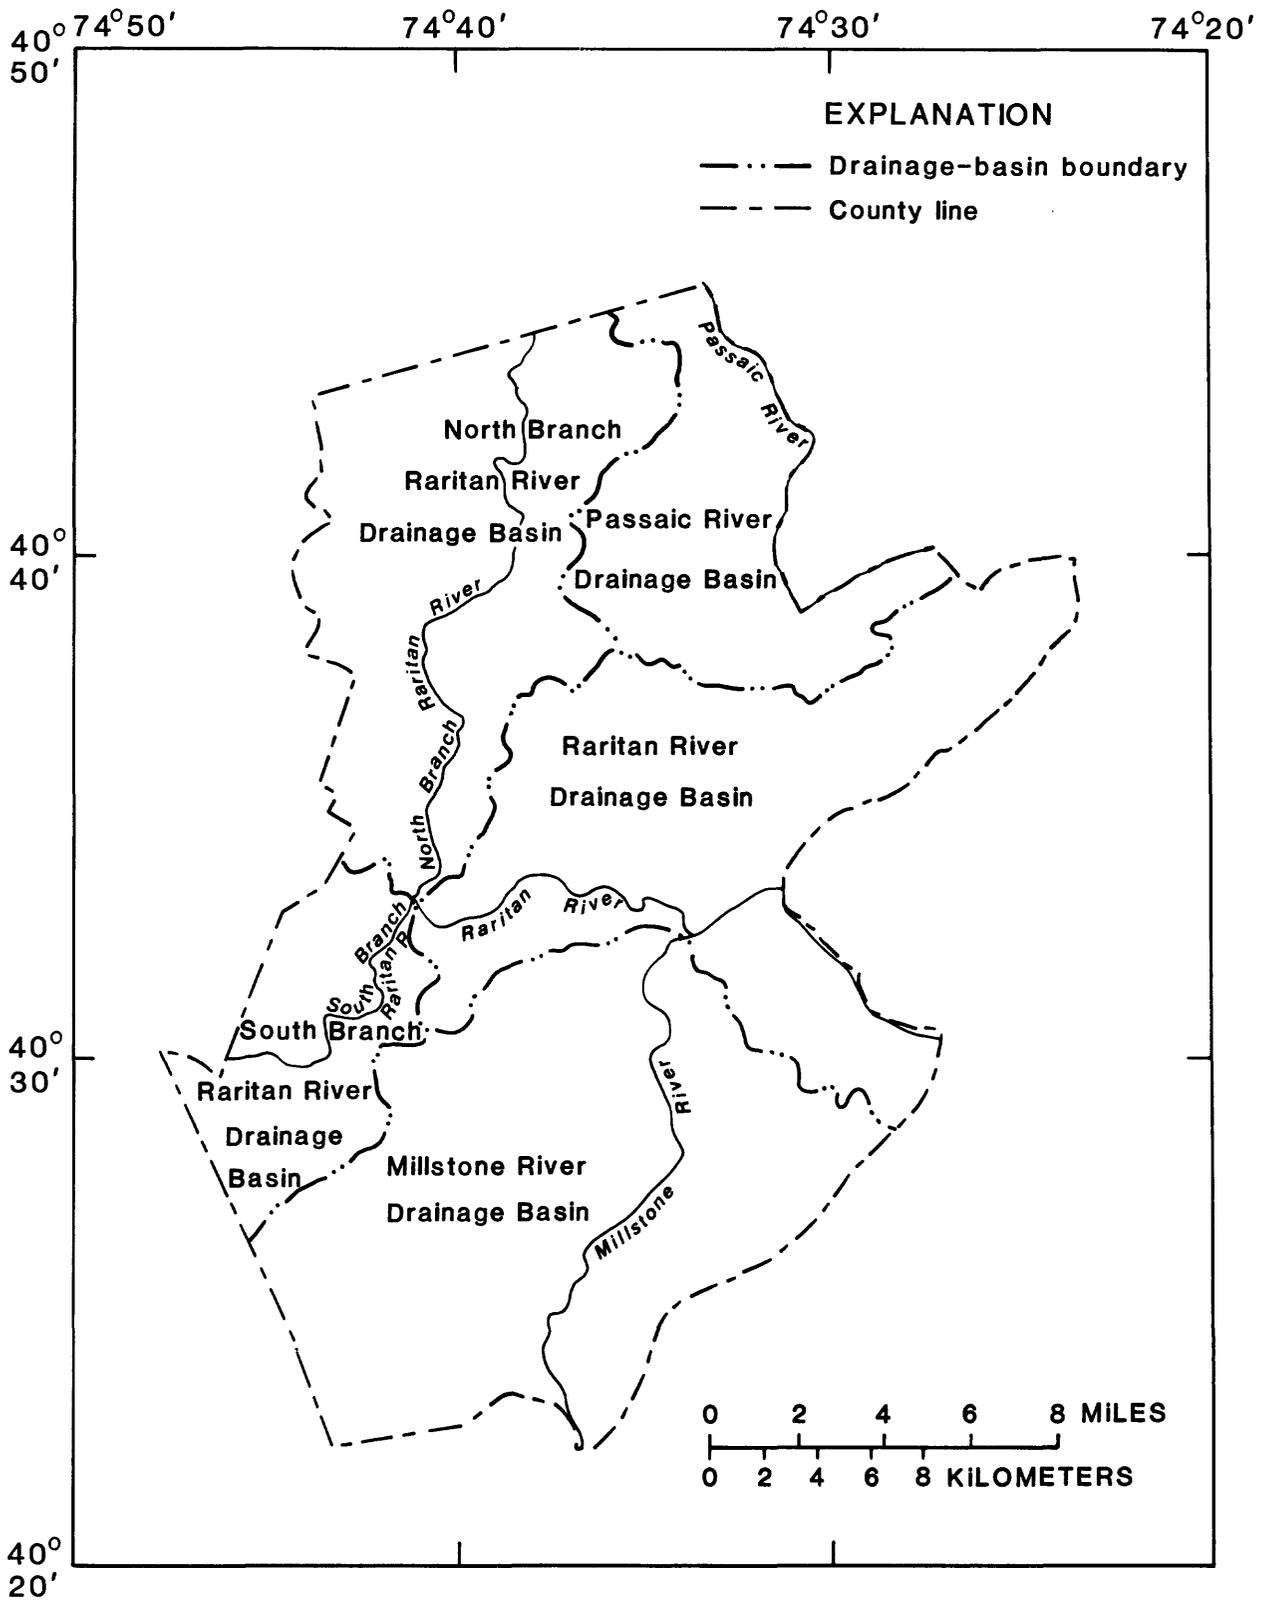

Figure 3.--Major drainage basins in Somerset County.

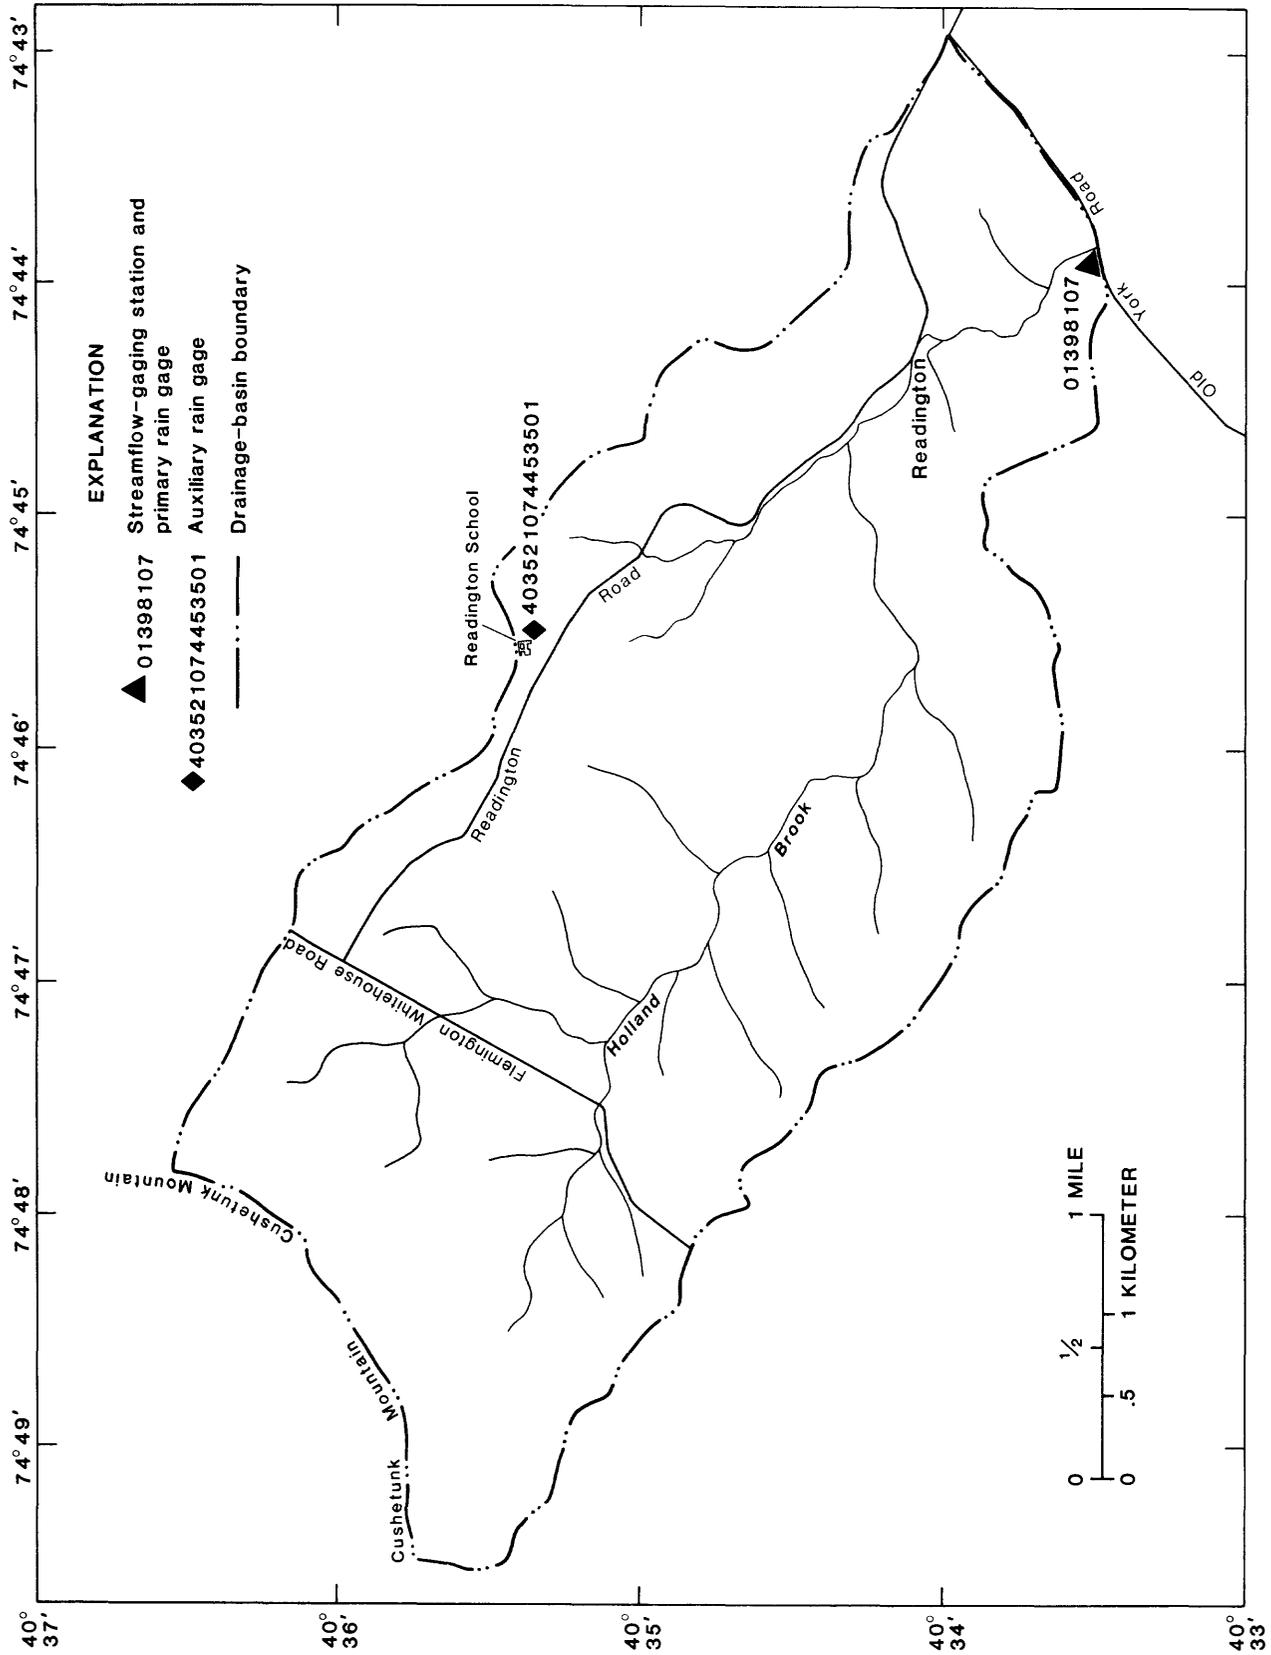

Figure 4.--Location of data-collection sites in the Holland Brook at Readington drainage basin.

drainage basin is formed by the Cushetunk Mountain (fig. 4). Land use is predominantly agricultural; however, single-unit homes are situated between the stream-gaging station and the village of Readington.

North Branch Raritan River near Far Hills (01398500)

The drainage area of the basin upstream from the gage is 26.2 mi<sup>2</sup>. The gaging station is 1.6 miles north of Far Hills (fig. 1). The station is on the left bank, 75 feet upstream from Ravine Lake Dam (fig. 5). Ravine Lake is a 37 acre lake created by a masonry dam. The stream drains southward to its confluence with the South Branch Raritan River at South Branch, forming the Raritan River. Land use is predominantly rural; commercial and residential development of high density is mostly in Mendham.

Peters Brook near Raritan (01400300)

The drainage area of the basin upstream from the gage is 4.19 mi<sup>2</sup>. The gaging station is 1.5 miles north of Raritan (fig. 1). The station is on the left bank, 12 feet upstream from the bridge on Garretson Road (fig. 6). From the gage, the stream drains southward 2.5 miles to the confluence with the Raritan River at Somerville. Land use consists of single-unit homes of moderate density, a golf course and some office complexes. Two major highways run parallel with the principal direction of drainage and cross stream tributaries in several places. Interstate Route 287 and U.S. Routes 202 and 206 contribute significantly to the amount of impervious land surface in the drainage basin. The northeastern drainage divide of the watershed is the First Watchung Mountain.

Pike Run at Belle Mead (01401650)

The drainage area of the basin upstream from the gage is 5.36 mi<sup>2</sup>. The gaging station is 0.7 mile east of Belle Mead (fig. 7). The station is on the right bank, 20 feet upstream from Township Line Road. The stream drains southeastward 3.9 miles to Beden Brook near Rocky Hill. Land use is agricultural except for the drainage area affected by the Belle Mead Depot and U.S. Route 206 both of which, contribute significantly to impervious cover. The western border of the watershed is formed by Sourland Mountain.

Royce Brook tributary near Belle Mead (01402600)

The drainage area of the basin upstream from the gage is 1.2 mi<sup>2</sup>. The gaging station is 2.0 miles north of Belle Mead (fig. 1). The station is on the right bank, 25 feet upstream from the bridge on State Highway 514 (Amwell Road) (fig. 8). From the gage, the stream drains southward 1,200 feet to its mouth at Royce Brook near Belle Mead. Land use is mainly moderate- to high-density residential homes, but also includes two high-rise commercial complexes centrally located in the drainage basin. This stream has been regulated by a storm-water detention basin 540 feet upstream from the streamflow-gaging station since 1980.

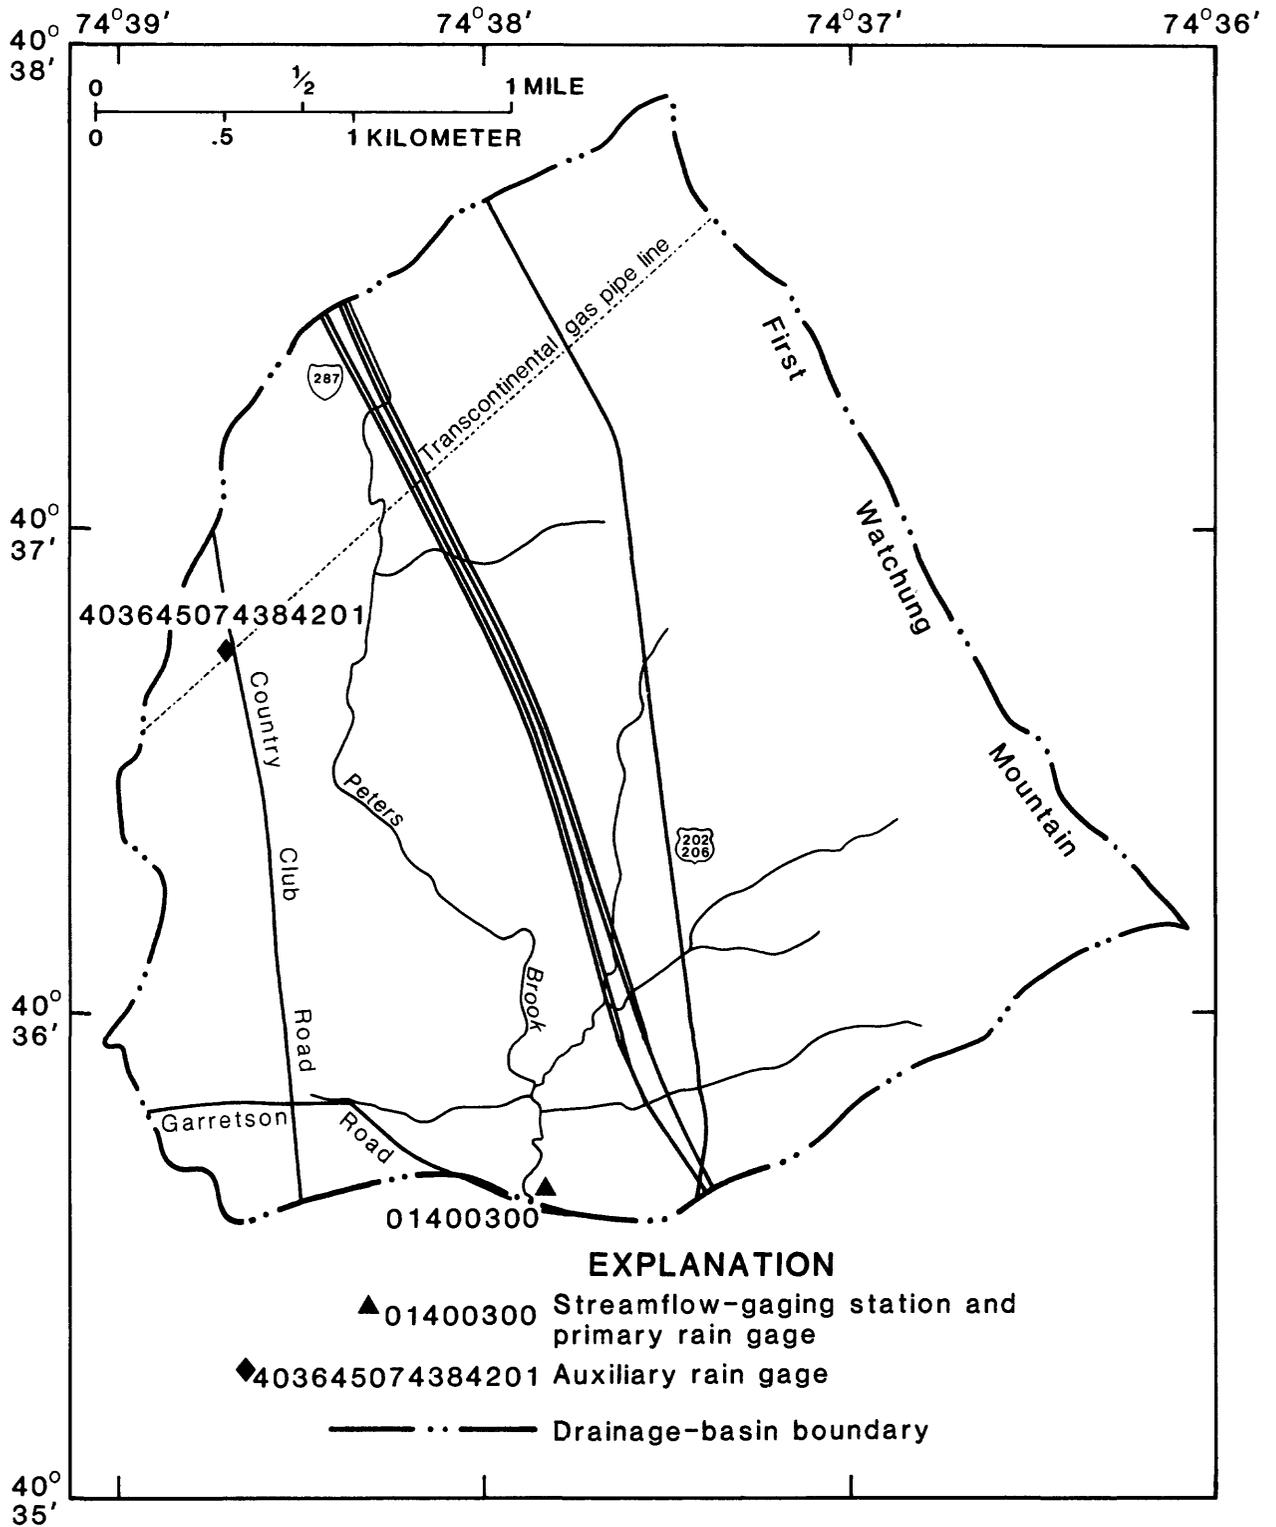

Figure 6.--Location of data-collection sites in the Peters Brook near Raritan drainage basin.

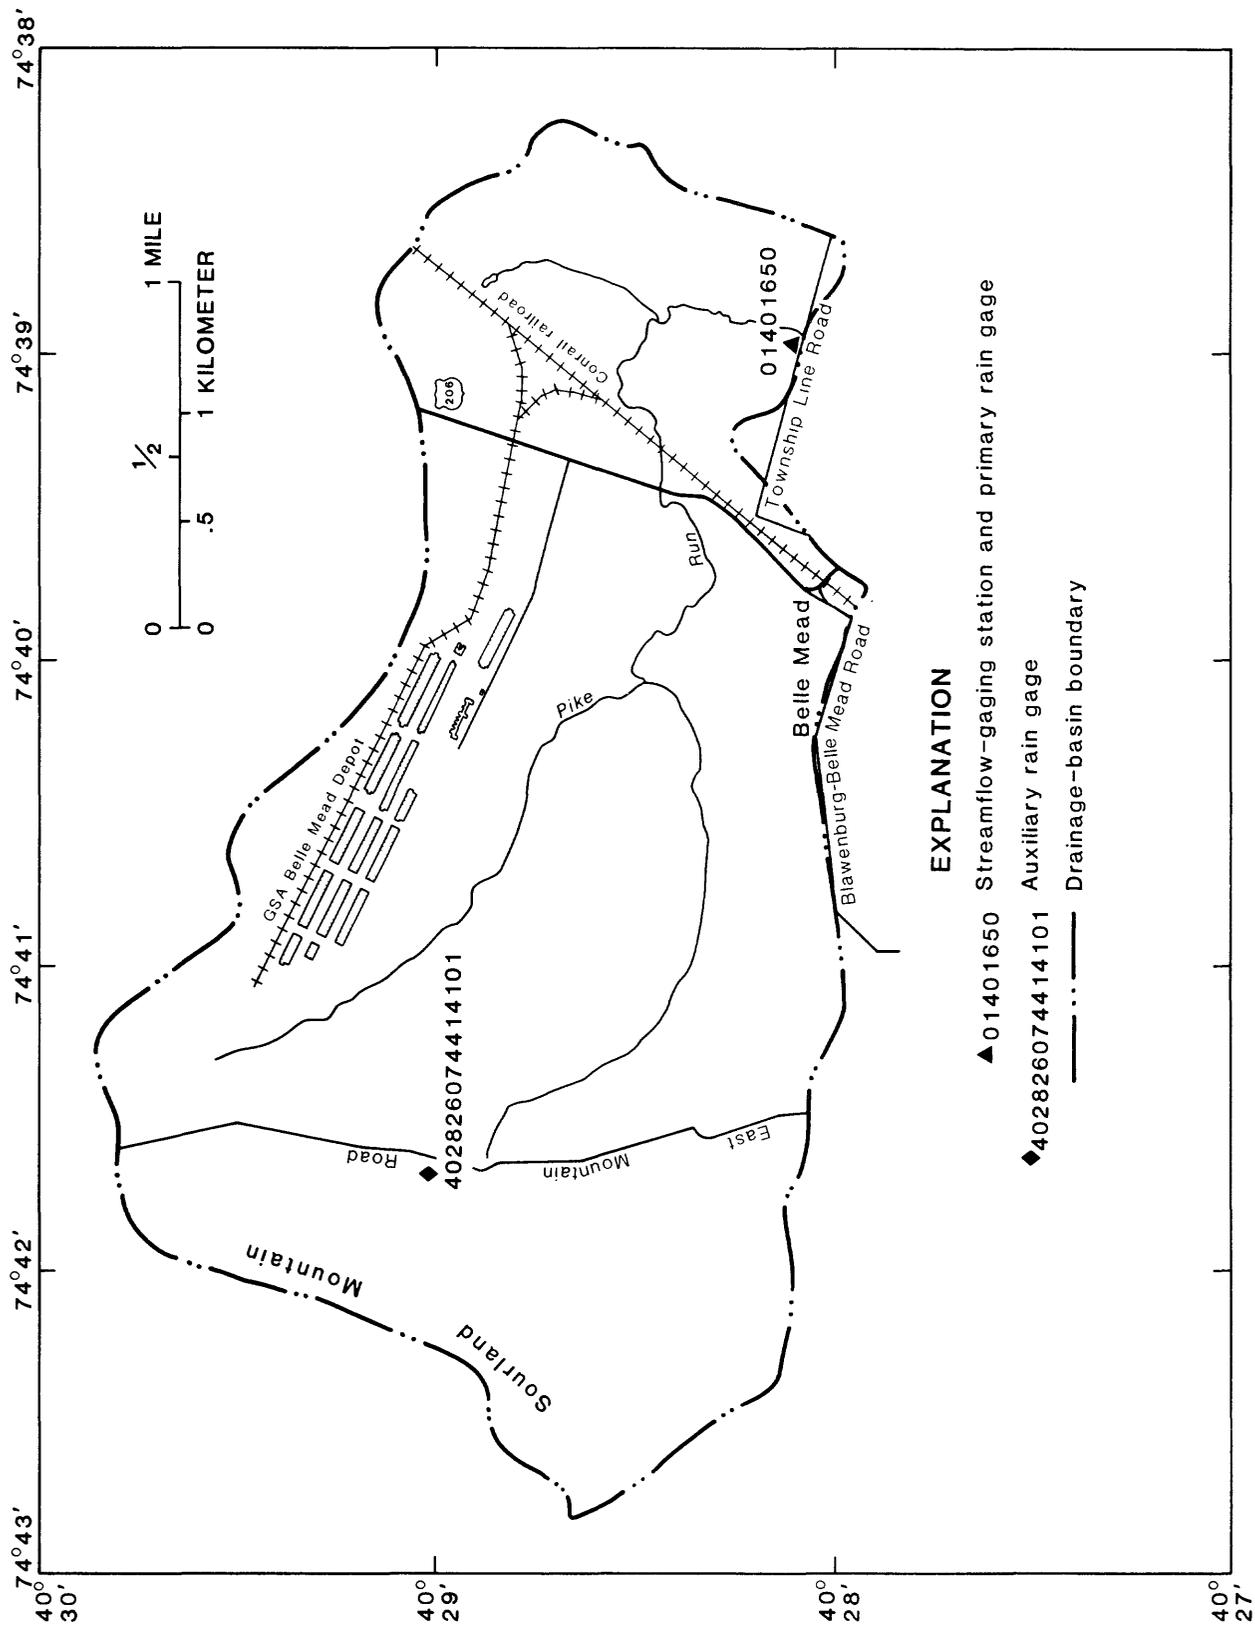

Figure 7.--Location of data-collection sites in the Pike Run at Belle Mead drainage basin.

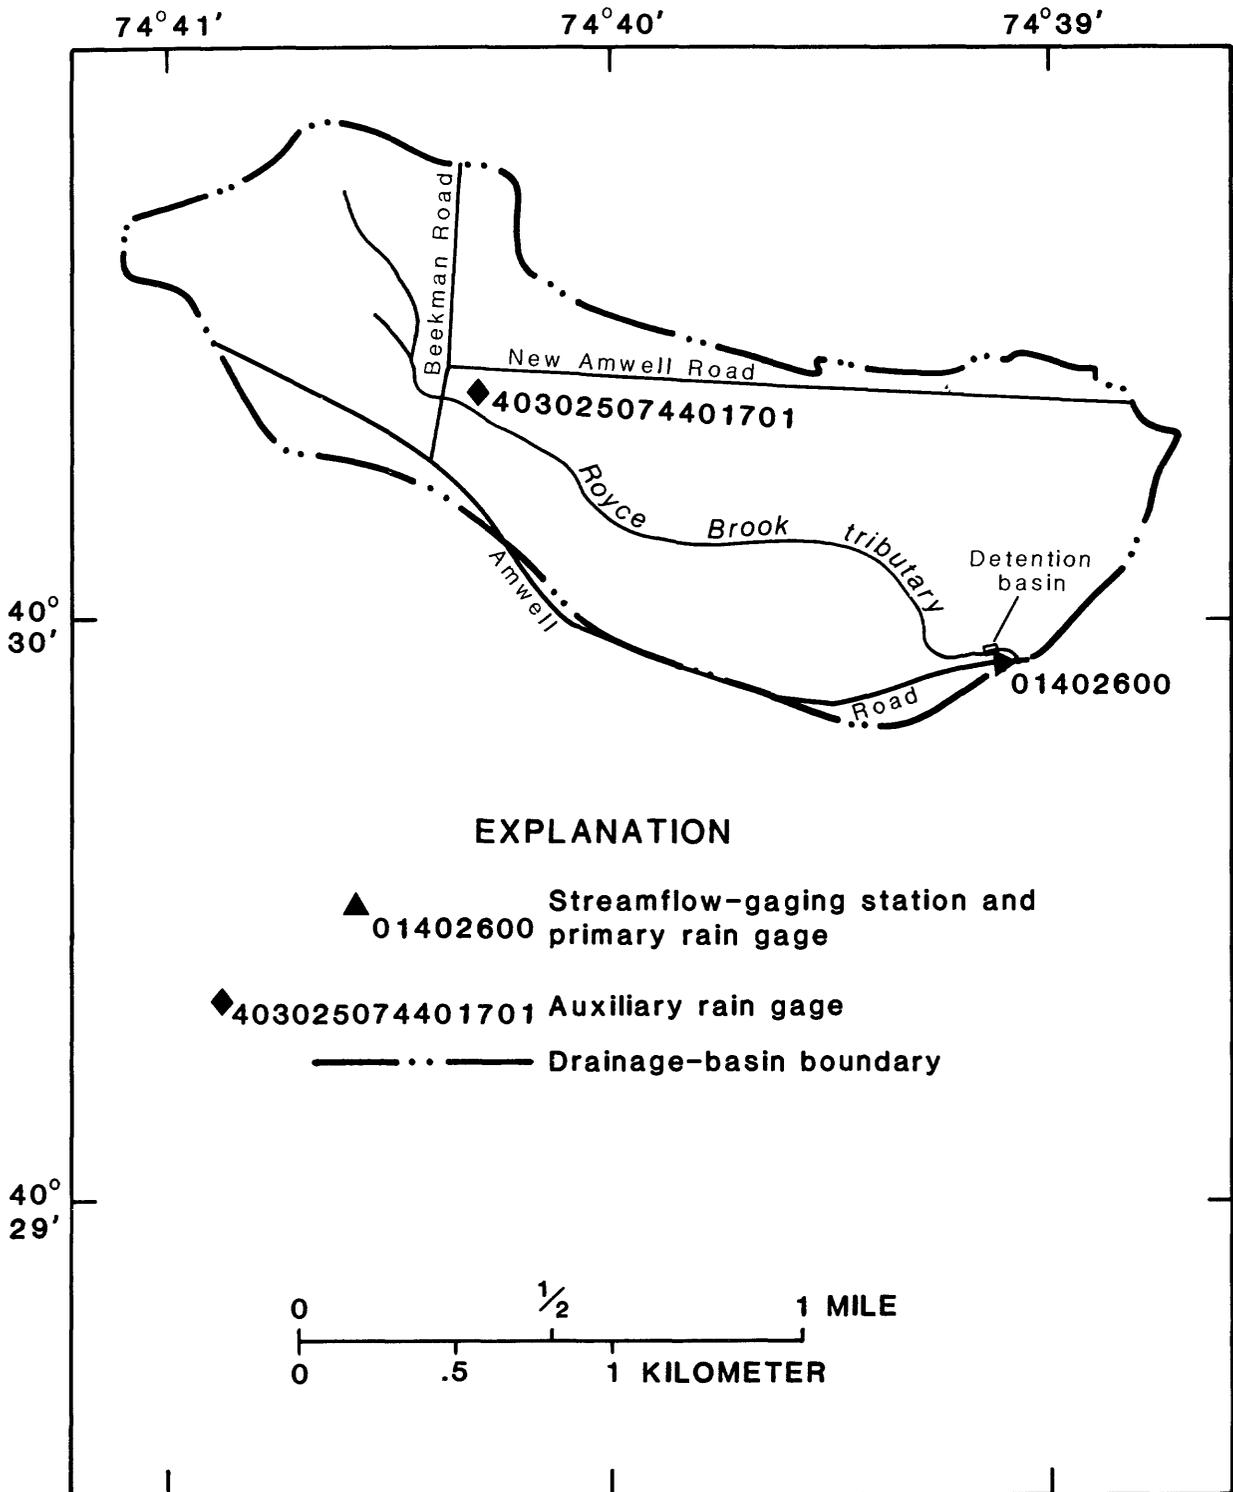

Figure 8.--Location of data-collection sites in the Royce Brook tributary near Belle Mead drainage basin.

### West Branch Middle Brook near Martinsville (01403150)

The drainage area of the basin upstream from the gage is 1.99 mi<sup>2</sup>. The gaging station is 1.4 miles northwest of Martinsville (fig. 1). The station is on the left bank, 150 feet upstream from the bridge on Crim Road (fig. 9). From the gage, the stream drains southeastward 1.8 miles to the confluence with the East Branch Middle Brook forming Middle Brook. Land use is predominantly single-unit homes of moderate density, and woodlands. The First Watchung Mountain forms the southwestern drainage divide of the basin and the Second Watchung Mountain forms most of the northeastern drainage divide.

### Green Brook at Seeley Mills (01403400)

The drainage area of the basin upstream from the gage is 6.23 mi<sup>2</sup>. The gaging station is 0.5 mile northwest of Scotch Plains (fig. 1). The station is on the right bank, 300 feet downstream from the bridge on Diamond Hill Road (fig. 10). The mainstem, downstream from the gage, drains eastward through the First Watchung Mountain to Bound Brook near Middlesex. The drainage basin is divided into two separate regions, drained by Blue Brook and Green Brook. Blue Brook drains through the Watchung Reservation, an area of undeveloped park land. Within the Watchung Reservation, Blue Brook drains through Lake Surprise and Seeleys Pond. Green Brook drains through high-density residential and commercial areas.

### East Branch Stony Brook at Best Lake at Watchung (01403535)

The drainage area of the basin upstream from the gage is 1.57 mi<sup>2</sup>. The gaging station is 2,700 feet northeast of Watchung (fig. 1). The station is on the right bank, 700 feet upstream from the dam on Best Lake, a 5-acre lake created by a masonry dam (fig. 11). The stream drains southwestward 2,400 feet from the gage to Stony Brook. Land use is single-unit homes of moderate density, and woodlands. The drainage basin lies between the First and Second Watchung Mountains.

## SITE IDENTIFICATION

The data collected at individual drainage basins are presented in downstream order in the section "Data Tables" at the end of this report. Each streamflow-gaging station is identified by a U.S. Geological Survey station number. This number contains a two-digit prefix number, "01", which represents streams in the North Atlantic Slope Basin, followed by a six-digit downstream order number. A complete description of downstream order and station numbers is given in Bauersfeld and others (1985). Rain gages located at stream-gaging stations use the same 8-digit number, whereas auxiliary rain gages are identified by 15-digit station numbers based on latitude and longitude.

## COLLECTION AND COMPILATION OF DATA

Discharge and rainfall data at individual gages in the study area are given in the section "Data Tables." Unit-rainfall and unit-discharge data are available upon request from the U.S. Geological Survey, New Jersey District office.

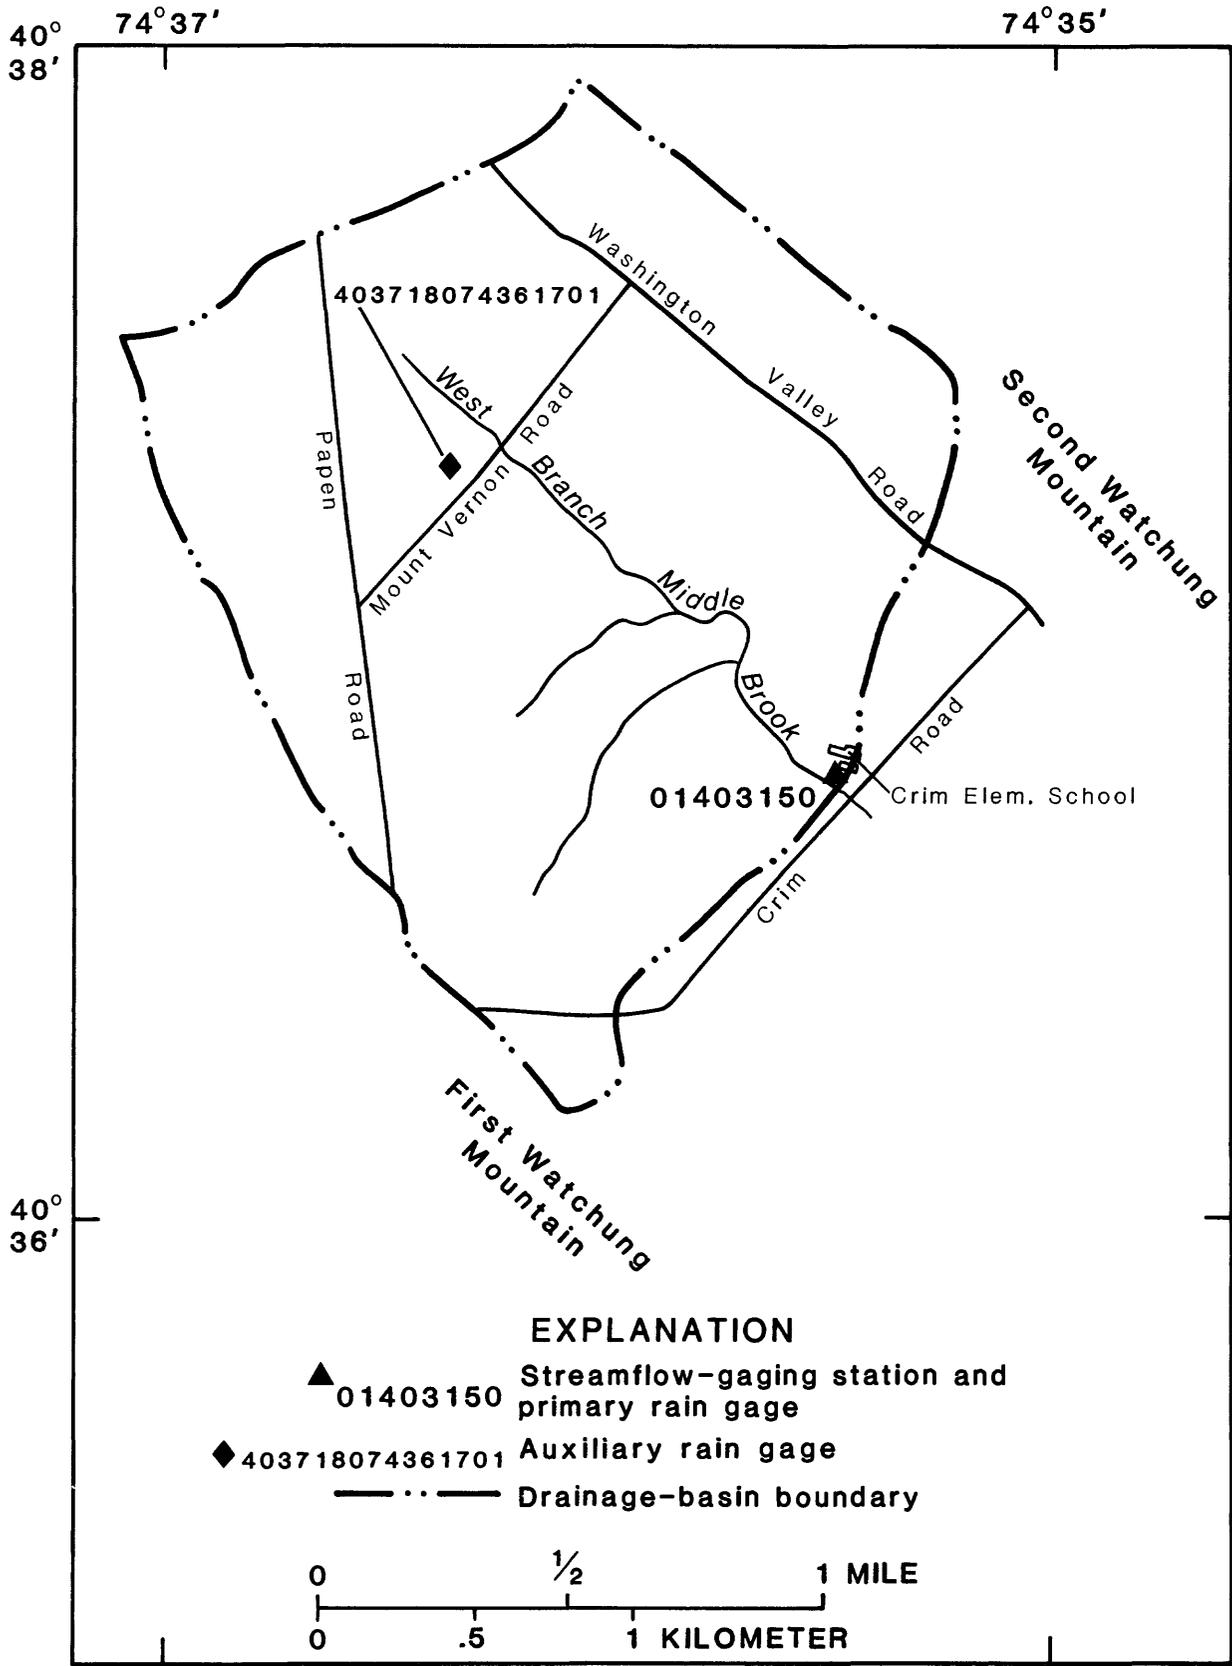

Figure 9.--Location of data-collection sites in the West Branch Middle Brook near Martinsville drainage basin.

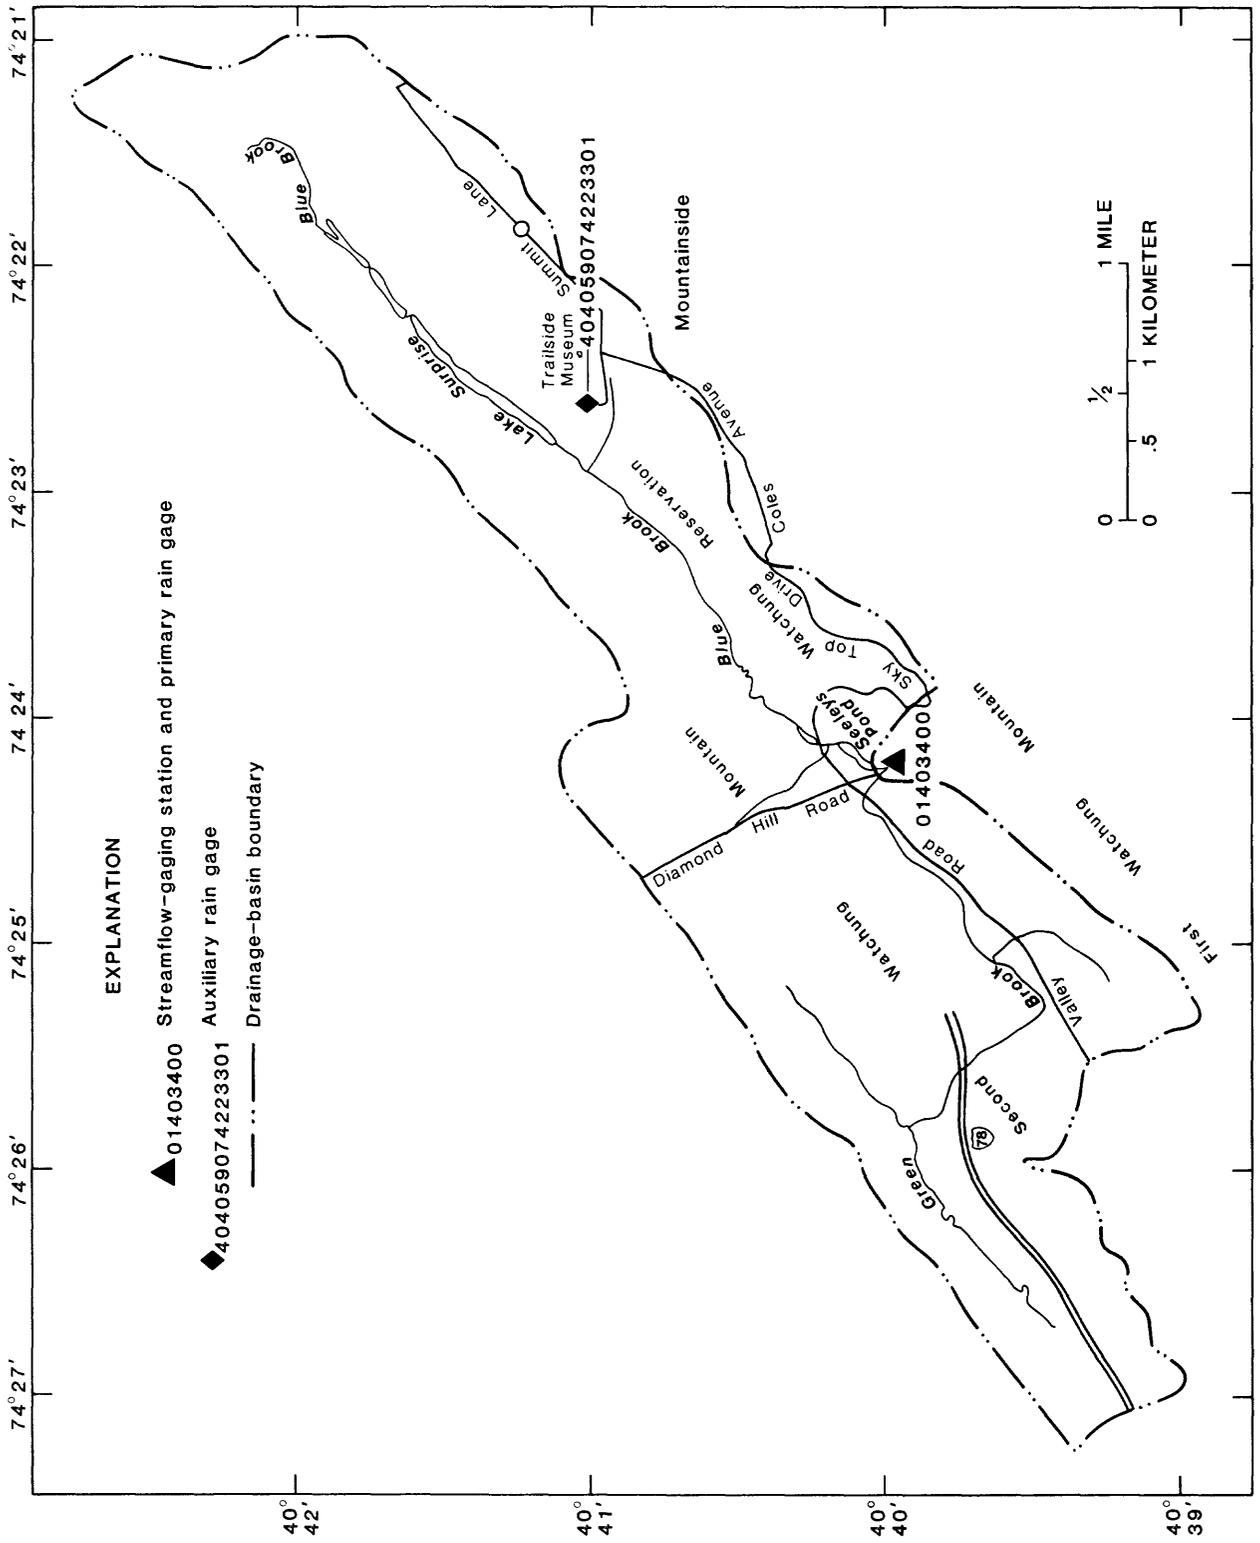

Figure 10.--Location of data-collection sites in the Green Brook at Seeley Mills drainage basin.

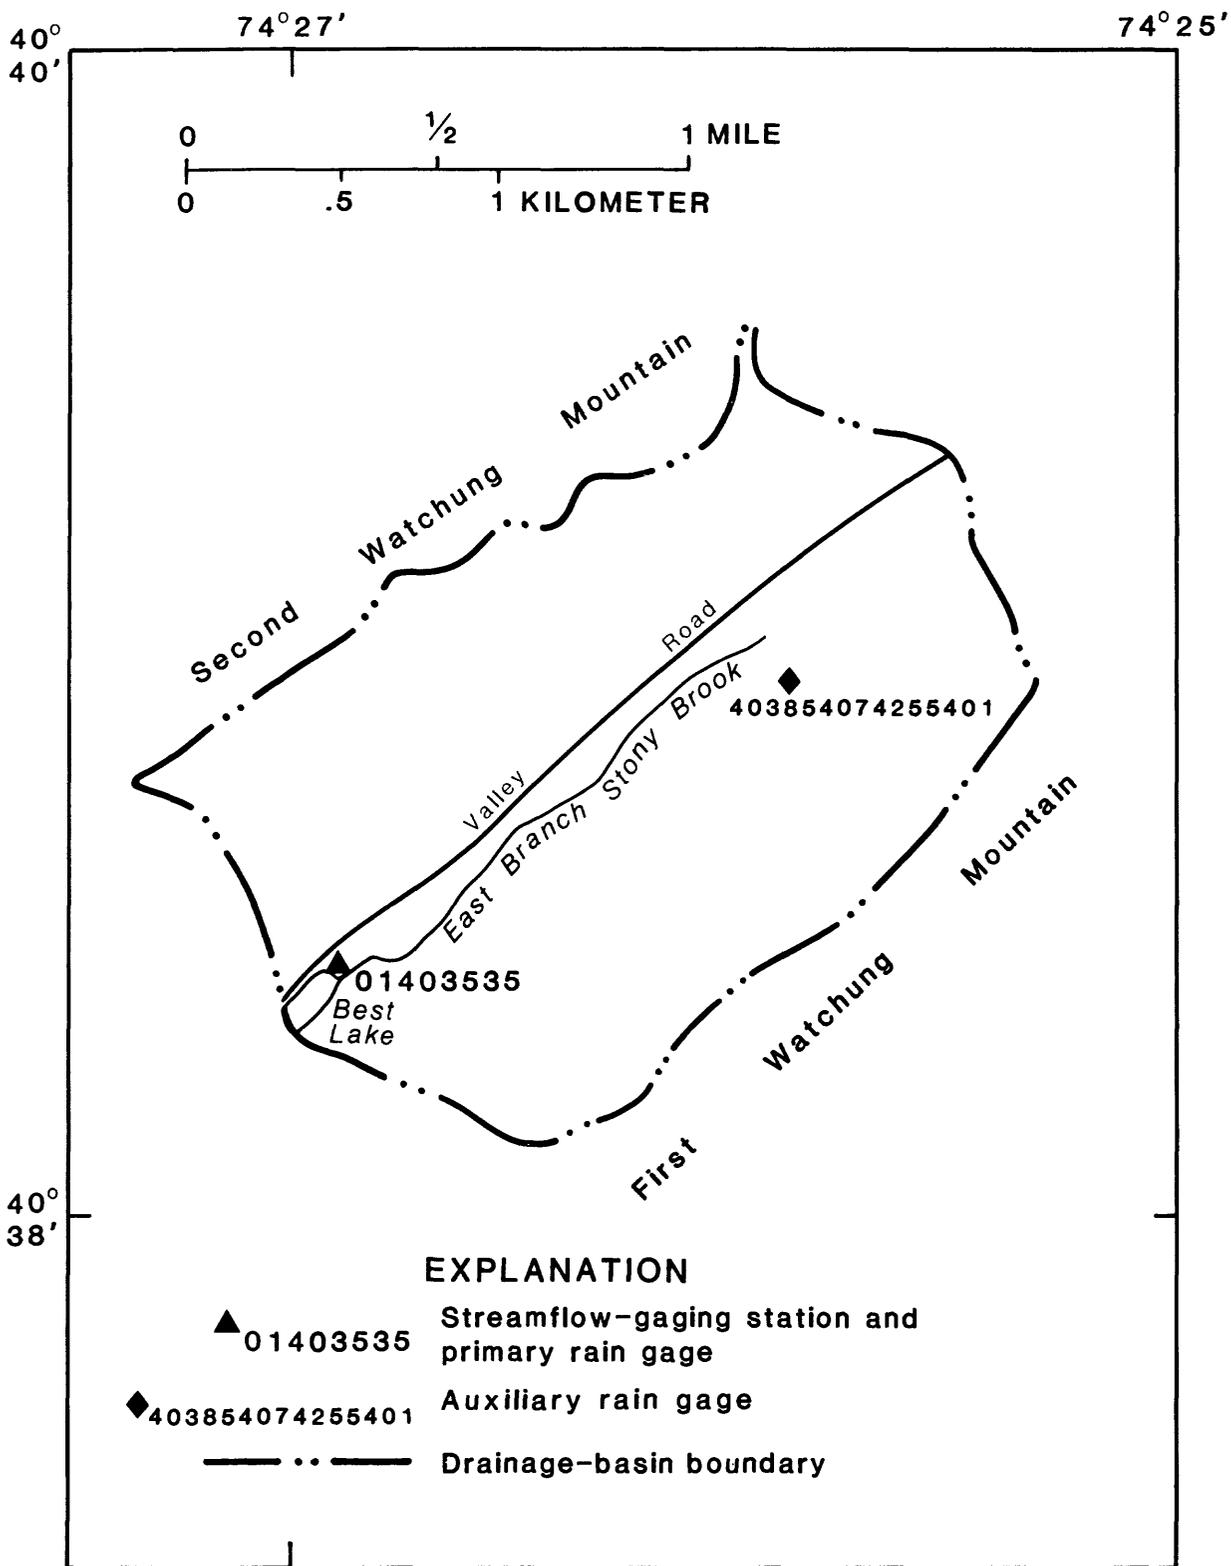

Figure 11.--Location of data-collection sites in the East Branch Stony Brook at Best Lake at Watchung drainage basin.

## Rainfall

Rainfall data were collected at 16 recording rain gages. The gages are weighing-type rain gages, with 8-inch diameter collector openings, that record to the nearest 0.1 inch on 16-channel paper tape. Each basin contained a rain gage situated next to the streamflow-gaging station and an auxiliary rain gage located upstream of the streamflow-gaging station, in the upper reaches of the drainage basin. The auxiliary rain gages were installed to provide better areal coverage and data continuity. Location of the auxiliary rain gages are given in table 1 and are shown on figures 4-11.

Daily rainfall data were verified for the storm events only. Verification consisted of screening unit data for value changes greater than 0.2 inch during 5-minute periods and comparing daily values for the main and auxiliary gages. For periods of missing data, the data from the main gage were substituted for the auxiliary gage and the auxiliary for the main. Daily rainfall was totaled as of midnight of the day. For periods of snow, the main rain gages did not record the snow correctly, because a tube was used to transfer the rainfall from the collector to the weighing device inside the gage house. The 8-inch collector would fill with snow and the event would not be recorded until the snow melted. However, the auxiliary rain gages were filled with antifreeze, and the liquid equivalent of the snow was recorded correctly. Rainfall intensity-duration data developed from rainfall data are presented in the section "Data Tables" and represent the storms selected for modeling. The duration of rain on the rainfall intensity-duration data is defined as the time span from the recording of the first 0.1 inch of rain to the last. Individual storms were defined and considered independent if the hydrograph receded to a well-defined trough between the peaks.

## Runoff

Runoff data are based on discharge measurements and stage records at eight continuous-record streamflow-gaging stations. Stage records are recorded on 16-channel paper tape by analog-to-digital water-level recorders. The water-level recorders are operated by a float-drive mechanism and record gage-heights to the nearest 0.01 foot.

Individual storm-runoff data are presented in the "Data Tables" section. Base flow noted in these tables is the minimum discharge recorded at the beginning of the storm period and was assumed to be constant during the storm.

RARITAN RIVER BASIN

01398500 NORTH BRANCH RARITAN RIVER NEAR FAR HILLS, NJ

LOCATION.--Lat 40°42'30", long 74°38'11", Somerset County, Hydrologic Unit 02030105, on left bank 75 ft upstream from Ravine Lake Dam, 1.6 mi north of Far Hills, and 2.3 mi upstream from Peapack Brook. Rain gage located at bridge 900 ft downstream from gage.

DRAINAGE AREA.--26.2 mi<sup>2</sup>.

WATER-DISCHARGE RECORDS

PERIOD OF RECORD.--October 1921 to September 1975, October 1977 to 1984. Operated as crest-stage gage water years 1976-77. Monthly discharge only for some periods, published in WSP 1302.

GAGE.--Water-stage recorder and crest-stage gage above masonry dam. Datum of gage is 224.49 ft National Geodetic Vertical Datum of 1929 (New Jersey Geological Survey bench mark). Prior to June 18, 1925, nonrecording gage in stilling box at left end of dam at same datum.

REMARKS.--Water-discharge records fair. Records given herein include diversion by small turbine at dam and returned to river 1,000 ft downstream from Ravine Lake Dam. Flow regulated occasionally by operation of waste gate in dam.

COOPERATION.--Gage-height record collected in cooperation with Somerset County.

AVERAGE DISCHARGE.--61 years (water years 1922-75, 1978-80) 48.2 ft<sup>3</sup>/s, 24.88 in/yr.

EXTREMES FOR PERIOD OF RECORD.--Maximum discharge, 6,390 ft<sup>3</sup>/s Aug. 28, 1971, gage height, 7.28 ft, from rating curve extended above 2,000 ft<sup>3</sup>/s on basis of computation of peak flow over dam; no flow at times when Ravine Lake was filling.

EXTREMES OUTSIDE PERIOD OF RECORD.--Stage of 7.6 ft, from floodmark, occurred July 23, 1919, discharge about 7,000 ft<sup>3</sup>/s.

MAXIMUM DISCHARGE FOR 1980-84 WATER YEARS.--Peak discharges above base of 700 ft<sup>3</sup>/s and maximum (\*):

RARITAN RIVER BASIN

01400300 PETERS BROOK NEAR RARITAN, NJ

LOCATION.--Lat 40°35'37", long 74°37'51", Somerset County, Hydrologic Unit 02030105, on left bank 12 ft upstream from bridge on Garretson Road, 1.5 mi north of Raritan, and 2.5 mi upstream from mouth.

DRAINAGE AREA.--4.19 mi<sup>2</sup>.

WATER-DISCHARGE RECORDS

PERIOD OF RECORDS.--May 1978 to 1984.

GAGE.--Water-stage recorder. Datum of gage is 68.713 ft National Geodetic Vertical Datum of 1929 (levels by Somerset County).

REMARKS.--Water-discharge records fair.

COOPERATION.--Gage-height record collected in cooperation with Somerset County.

EXTREMES FOR PERIOD OF RECORD.--Maximum discharge, 1,090 ft<sup>3</sup>/s July 7, 1984, gage height, 8.15 ft; no flow part or all of some days in most years.

MAXIMUM DISCHARGE FOR 1980-84 WATER YEARS.--Peak discharges above base of 500 ft<sup>3</sup>/s and maximum (\*):

RARITAN RIVER BASIN

01401650 PIKE RUN AT BELLE MEAD, NJ

LOCATION.--Lat 40°28'05", long 74°38'57", Somerset County, Hydrologic Unit 02030105, on right bank 20 ft upstream of bridge on Township Line Road, 0.7 mi east of Belle Mead, 0.8 mi upstream of Crusier Brook, and 1.0 mi downstream of bridge on U.S. Route 206.

DRAINAGE AREA.--5.36 mi<sup>2</sup>.

WATER-DISCHARGE RECORDS

PERIOD OF RECORD.--July 1980 to 1984.

GAGE.--Water-stage recorder, crest-stage gage, and concrete parking-block control. Datum of gage is 58.85 ft National Geodetic Vertical Datum of 1929.

REMARKS.--Water-discharge records fair.

COOPERATION.--Gage-height record collected in cooperation with Somerset County.

EXTREMES FOR PERIOD OF RECORD.--Maximum discharge, 2,010 ft<sup>3</sup>/s July 7, 1984, gage height, 11.76 ft; no flow many days in August and September 1980.

EXTREMES OUTSIDE PERIOD OF RECORD.--Maximum stage since at least 1810, 12.1 ft from floodmark, present datum, Aug. 28, 1971.

MAXIMUM DISCHARGE FOR 1980-84 WATER YEARS.--Peak discharges above base of 300 ft<sup>3</sup>/s and maximum (\*):

RARITAN RIVER BASIN

01402600 ROYCE BROOK TRIBUTARY NEAR BELLE MEAD, NJ

LOCATION.--Lat 40°29'56", Long 74°39'05", Somerset County, Hydrologic Unit 02030105, on right bank 25 ft upstream from bridge on State Highway 514 (Ammwell Road), 1,200 ft upstream from mouth, and 2.0 mi north of Belle Mead.

DRAINAGE AREA.--1.20 mi<sup>2</sup>.

WATER-DISCHARGE RECORDS

PERIOD OF RECORD.--October 1966 to September 1974, January 1980 to 1984.

GAGE.--Water-stage recorder, crest-stage gage and concrete control. Datum of gage is about 68 ft National Geodetic Vertical Datum of 1929. Prior to September 1974 at same site at datum 0.79 ft higher.

REMARKS.--Water-discharge records fair. Storm-water detention basin completed above station in summer of 1980.

AVERAGE DISCHARGE.--12 years (water years 1967-74, 1981-1984), 2.46 ft<sup>3</sup>/s, 27.05 in/yr.

EXTREMES FOR PERIOD OF RECORD.--Maximum discharge, 1,450 ft<sup>3</sup>/s Aug. 28, 1971, gage height, 7.08 ft, present datum, from high-water mark, from rating curve extended above 203 ft<sup>3</sup>/s on basis of slope-area measurement of peak flow; no flow part of or all of some days in most years.

MAXIMUM DISCHARGE FOR 1980-84 WATER YEARS.--Peak discharges above base of 125 ft<sup>3</sup>/s and maximum (\*) for period:

RARITAN RIVER BASIN

01403150 WEST BRANCH MIDDLE BROOK NEAR MARTINSVILLE, NJ

LOCATION.--Lat 40°36'44", long 74°35'28", Somerset County, Hydrologic Unit 02030105, on left bank 150 ft upstream from bridge on Crim Road, 1.4 mi northwest of Martinsville, and 1.8 mi upstream from confluence with East Branch Middle Brook.

DRAINAGE AREA.--1.99 mi<sup>2</sup>.

WATER-DISCHARGE RECORDS

PERIOD OF RECORD.--June 1979 to 1984.

GAGE.--Water-stage recorder. Datum of gage is 240.48 ft National Geodetic Vertical Datum of 1929 (levels by Somerset County).

REMARKS.--Water-discharge records fair.

COOPERATION.--Gage-height record collected in cooperation with Somerset County.

EXTREMES FOR PERIOD OF RECORD.--Maximum discharge, 816 ft<sup>3</sup>/s May. 11, 1981, gage height, 5.60 ft; no flow part or all of each day Sept. 19-30, 1980.

MAXIMUM DISCHARGE FOR 1980-1984 WATER YEARS.--Peak discharges above base of 225 ft<sup>3</sup>/s, revised 1984, and maximum (\*):

RARITAN RIVER BASIN

01403400 GREEN BROOK AT SEELEY MILLS, NJ

LOCATION.--Lat 40°39'53", long 74°24'10", Somerset County, Hydrologic Unit 02030105, on right bank at Seeley Mills, 250 ft downstream from Blue Brook, 300 ft downstream from bridge on Diamond Hill Road, and 0.5 mi northwest of Scotch Plains.

DRAINAGE AREA.--6.23 mi<sup>2</sup>.

WATER-DISCHARGE RECORDS

PERIOD OF RECORD.--Occasional low-flow measurements, water years 1959-64, 1969: annual maximum, water years 1969-79. June 1979 to 1984. Fragmentary records 1944-53 in the files of the Geological Survey. Crest-stage data 1927-38, 1958-68 in files of Union County Park Commission.

GAGE.--Water-stage recorder. Datum of gage is 184.44 ft National Geodetic Vertical Datum of 1929. From 1944 to 1953, water-stage recorder and masonry dam about 400 ft downstream above lower Seeley Mills dam at different datum. From July 1969 to May 1979, crest-stage gage about 450 ft downstream below lower Seeley Mills dam (washed out May 29, 1968) at different datum.

REMARKS.--Water-discharge records fair.

COOPERATION.--Gage-height record collected in cooperation with Somerset County.

EXTREMES FOR PERIOD OF RECORD.--Maximum discharge, 6,240 ft<sup>3</sup>/s Aug. 2, 1973, gage height, 16.1 ft, from rating curve extended above 600 ft<sup>3</sup>/s on basis of slope-area measurement of peak flow, site and datum then in use; no flow part or all of some days in September 1981.

EXTREMES OUTSIDE PERIOD OF RECORD.--Flood of July 23, 1938 reached an elevation of 196.5 ft New Jersey Geological Survey datum, above lower Seeley Mills dam.

MAXIMUM DISCHARGE FOR 1980-84 WATER YEARS.--Peak discharges above base of 250 ft<sup>3</sup>/s and maximum (\*):

RARITAN RIVER BASIN

01403535 EAST BRANCH STONY BROOK AT BEST LAKE AT WATCHUNG, NJ

WATER-DISCHARGE RECORDS

LOCATION.--Lat 40°38'25", long 74°26'52", Somerset County, Hydrologic Unit 02030105, 700 ft upstream of dam on Best Lake in Watchung, 1,400 ft upstream of mouth, and 2.5 mi west of Plainfield railroad station.

DRAINAGE AREA.--1.57 mi<sup>2</sup>.

WATER-DISCHARGE RECORDS

PERIOD OF RECORD.--July 1980 to 1984.

GAGE.--Water-stage recorder above concrete dam. Datum of gage is 193.87 ft National Geodetic Vertical Datum of 1929 (levels by Somerset County).

REMARKS.--Water-discharge records fair. Records given herein represent flow over dam and leakage.

COOPERATION.--Gage-height record collected in cooperation with Somerset County.

EXTREMES FOR PERIOD OF RECORD.--Maximum discharge, 484 ft<sup>3</sup>/s July 7, 1984, gage height, 2.56 ft; no flow part or all of many days in 1980 and 1981.

EXTREMES OUTSIDE PERIOD OF RECORD.--Flood of August 3, 1973, reached a stage of 5.4 ft present datum, from floodmarks, discharge, 2,840 ft<sup>3</sup>/s by computation of flow over dam, embankment and road.

MAXIMUM DISCHARGE FOR 1980-84 WATER YEARS.--Peak discharges above base of 100 ft<sup>3</sup>/s and maximum (\*):

Date	Time	Discharge (ft <sup>3</sup> /s)	Gage height (ft)	Date	Time	Discharge (ft <sup>3</sup> /s)	Gage height (ft)
